The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Galopin et al (Abstract 0056, 224<sup>th</sup> American Chemical Society National Meeting, Aug 2002).

Galopin et al (Abstract 0056, 224<sup>th</sup> American Chemical Society National Meeting, Aug 2002) disclose a variety of derivatives of sanshool chemicals for use in foods as is claimed (see abstract).

The claims differ as to the specific substituents.

Galopin et al disclose a minimal structure and address the synthesis of derivatives.

In the absence of a showing to the contrary, once the minimal structure is identified the selection and manipulation of substituents is no more than obvious and well-within the skill of the art.

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to use the claimed substituents in that of Galopin et al because once the minimal structure has been identified the manipulation of substituents is no more than conventional in the art.

Applicant's arguments with respect to claims 17-23 have been considered but are moot in view of the new ground(s) of rejection.
